

printable magnet paper instruction guide

Easy to Apply Directions

1. Create a new file and check the box for "Use Registration Marks".
2. Place your "Print and Cut" image on your screen in the Silhouette software.
3. Once you have your image sized and placed on the screen to your liking, print your job to your regular printer. Be sure to feed your magnet paper into the printer so that it will print on the white side.
4. Feed your printed magnet paper into the Silhouette for cutting.
5. In the control panel, select "read registration marks". Set your cutting speed to 1 and your thickness to 20-25 and use the yellow cap.
6. Click "cut" and the Silhouette optic scanner will read the registration marks before actually giving you the option to cut.
7. When the Silhouette is finished cutting, remove the magnet paper and gently peel the shape out. The magnet should not cut all the way through to prevent snagging in the machine. If your magnet is cutting all the way through, try using a Silhouette cutting mat.
